Prototype 4.5 STM32 PCB

Power Supply

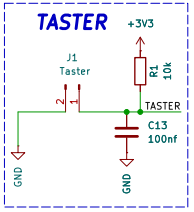

Microcontroller (and USB)

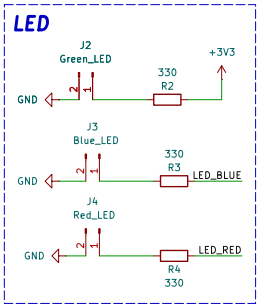

Pin-out using STM32CubeMX

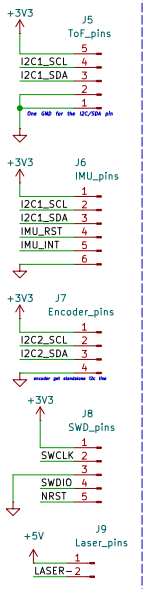

TASTER

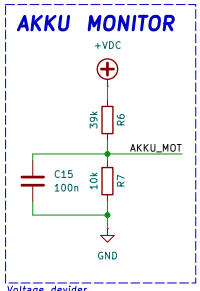

LED

BUCHSE

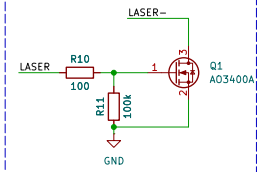

AKKU MONITOR

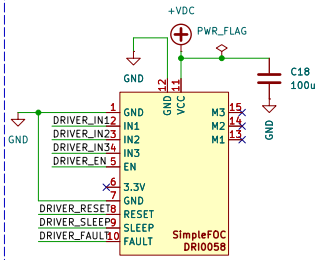

Voltage devider
V_adc = V_akku x (10k/10k + 39k)

LASER

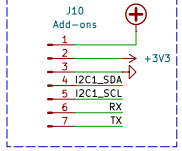

using N-Channel MOSFET as the laser switch

TREIBER

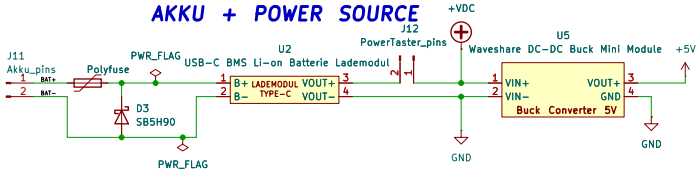

M1,M2,M3 connects directly to the Motor

ADD-ONS

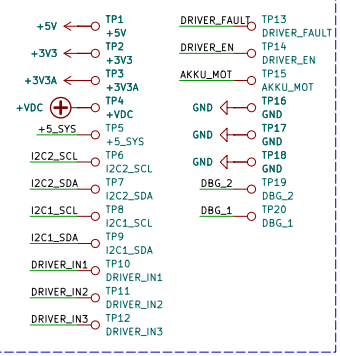

The addon port can be used for hacking the device and adding custom extensions, or while debugging. It exposes 3.3V power, the I2C bus and the RX/TX lines for serial output and communications. Test points provide solderable connections to more GPIO pins as well.

AKKU + POWER SOURCE

TEST POINTS

MOUNTING HOLES

footprint finished, DNP for I2C resistors
adding Test points and mounting holes
adding Laser switch

FH Aachen
